

# Regional Sewer Project

# Northern Parke County

Welcome and thank you for visiting the project profile for the Northern Parke County Regional Sewer Project. The goal is to provide you with information and resources related to a proposed new sewer system for Marshall and Bloomingdale.

---

## Project Background

Currently, **these towns are unsewered and handle wastewater through conventional septic tanks** and adsorption fields. Some of these septic tanks have been failing. **Failing septic systems create numerous public health and environmental issues** and the inability to sell property or expand facilities to support job growth.

---

## Proposed Project

The proposed project includes provisions to construct sanitary collection systems and send wastewater flow from Marshall, Bloomingdale, Turkey Run Elementary School and Turkey Run State Park to the existing wastewater treatment plant in Rockville. No new wastewater treatment plant will be constructed.

---

## Project Status and Funding

In order to alleviate these issues, a working group consisting of Marshall, Bloomingdale, Rockville and the Department of Natural Resources (DNR) officials are pursuing funding through the U.S. Department of Agriculture Rural Development (USDA RD) program as well as the Indiana Finance Authority State Revolving Fund (IFA SRF) program for a project to serve these unsewered communities.

**We ask for your  
engagement, questions and support.**
